mdelfede wrote on Tue, 15 April 2008 00:42really nice the usage of operator, in boost...I wonder if it can be implemented in upp to fill arrays and so.

Max

I see no good reason why it couldn't. I think the real question is how often do you really need it? These nice little tricks offer to little in the case of normal code, where data structures are most often populated IMO algorithmically, and in general one a one-by-one basis. In the cases a such syntactic sugars do not help that much. The nice part is that += operator, which can be quite expensive performance wise, with default pick semantics could be really nice and efficient.
