Well, ListBox control is a simple widget. It doesn't need SQL integration, multiple columns, etc. I want to use it to control which columns are visible in GridCtrl widget.

Stock(ListBox)		Current View(ListBox)
Column2		Column1
Column3		Column4
ColumnX	<=	Column5
ColumnX	=>	

In that case is better having a simple widget, because using ArrayCtrl or GridCtrl here and in other places where a ListBox is needed, will increase executable size.

It is possible to have something like Firefox "Grid" control have for hide its columns?
