I think that's a small issue. You can accomplish both your technical goals (fast, agile code) and still have the library 'feel' like it belongs as part of the standard template library.

I am not quite sure about it being a "small issue".

IMO it all starts with reasons for String vs std::string...

Mirek

This is where the peer review system is very helpful, I think.

To get an idea of what the review system looks like, you can view past reviews online, if you like:

<http://blog.gmane.org/gmane.comp.lib.boost.announce>

I don't think the Egg review is the best one to examine (not enough people participated)... I'd start with the review some folks did of the Logging library, to get a flavor for how the review process helps.
