bytefield wrote on Sun, 27 April 2008 00:48After spending a while with last version, my advice is not to upgrade from 7.10 to 8.04, better install a fresh copy of 8.04, in that way you have a full working system(without the errors which I've meet until now).

I agree with this. I got problem for failed packages to be replaced with the new one.

But i'm lucky, since i can boot and use it as normal user (sudo not working, but can be solved using live cd and fixing /etc/hosts)
