Perfect, with Execute() seems to work.

Now what I want is to get the parent window size to resize the opened window accordingly.

I'm getting ACCESS VIOLATION trying to do:

```
void CaseExp::Activate()
{
    SetFrameRect(0,0, GetParent()->GetSize().cx - 10, GetParent()->GetSize().cy - 10);
    WithCaseExpLayout<TopWindow>::Activate();
}
```

IDEas?
