tojocky wrote on Thu, 01 May 2008 10:53I have an error! Sorry for my incompetence but I need help!

c:\myapps\postgresql\PostgreSQL.h(7) : fatal error C1083: Cannot open include file: 'libpq-fe.h':
No such file or directory

Thanks a lot!

You are missing the correct include path (and quite likely library path, that would hit later...) in build method.

You need to have PostgreSQL installed and you need to put proper paths into the build method (in Setup menu) you are using.
