Subject: Some lack of features

Hi guys. Well i tried the last SVN version of TheIDE on Linux (Ubuntu) and i really liked! But i found one think that is missing. When i use the debugger the terminal don't appear with the already instructions executed (like printf's). Why? Is some feature that is being prepared?

Another think, but this one is my fault, i don't know how to use code auto-completion. For exemple:

```
struct area{
    int w;
    int l;
    char* name;
}var;

int main(){

     //var.
     return 0;
}
```

the commented line was a testing that i have done. Writing var. a list of contents of the struct should not appear? Or i need to do something?

Thanks for the explanation
