Sorry, couldn't keep my promise.

I probably miss something, but code below always was a problem.

```
const String& GetCppFile(int i)
{
INTERLOCKED_(cpp_file_mutex) {
    return cpp_file[i];
}
return String();
}
```

Should be something like that:

```
const String& GetCppFile(int i)
{
INTERLOCKED_(cpp_file_mutex) {
    return cpp_file[i];
}

    static String value;
    return value;
}
```

I'm not sure about thread-safety of static variable initialization though.
