1. Display class -> Displaytor (because it's a functor and not physical display)
  2. EditField and LineEdit -> shouldn't be both Edit+Something or Something+Edit?
  3. Shouldn't it be a pattern: all classes start with a "thing" and not "action"? like DateField, TextField etc...?
  4. sometimes Get() and sometimes GetData() -> shouldn't it be (always) Get+Something more precisely or all classes have only one "main" Get or GetData?
  5. SetFont() -> I'd expect to find it in all Text controls...
  6. ShowTabs in LineEdit is confusing esp. when searching with TabCtrl -> should be ShowTabChars...
