Thanks.

I got Postgres re-installed with headers and libs. So I'm down to this:

```
Postgres.cpp  
C:\projects\upp\PostgresExample\Postgres.cpp: In member function 'bool  
PostgreSQLTest::OpenDB()':  
C:\projects\upp\PostgresExample\Postgres.cpp:34: error: 'POSTGRESS' was not declared in this  
scope
```

Comes from this line:
SqlSchema sch(POSTGRESS);

I thought it might be a typo so I tried it as POSTGRES with no luck.

What is POSTGRESS and where do I find it?
