It seems to me that what you need is very similar to ColumnList, with only 2 (main) differences:

- items drawn left to right (not top to bottom)
- number of columns determined dynamically based on item width

so my suggestion would to modify that.

I've attached my quick and dirty attempt (it works quite well though). Use like a ColumnList, but you'll have to set ItemWidth to get sensible results when using a Display (default width is 50).
