Please do following corrections to your code:

in Layout()

```
 for (int i = 0; i < w; i++)
  grd.AddColumn("").AlignBottom();
```

and in PopulateGrid()

```
 //section 1
 for (int i = 0 ; i < h; i++)
  grd.AddRow(1, CellHeight);
```

Now everything should work. Height() is a only sytnax sugar. It dosn't couse grid refresh, rows heights recaluclation. However it can be confusign. I'll think about it. Align* for particualr row doesn't work now. I'll fix that in the next release.
