I think that for the main window, there is only a little difference between modal or modeless, as long as you have only one window.

In U++, dialogs are not different from other windows. To execute them in modal mode, use "Execute".

To open them in modeless mode, use OpenMain (or Open if you want it to pick current window as parent) and Close or destructor to close it.

Anyway, if you only have one main window, use Execute.
