Ok, thank you, that looks insightful.

Could there be an explanation why designer is not showing any controls that can be added to the layout?

Is it recommended to "hard code" the layout by hand, because the designer doesn't always work?

Edit: When creating a new package, the Template list is empty, so it is not possible to select a CtrlLib application? (2008.2 beta)

Edit2: Ok, found the solution: CtrlLib is to be added by hand (using "Insert new package"), after which the designer can be used without problem.

I suppose when one gets to understand UPP, it really seems a solid programming environment. Too bad about the documentation? I'm sure it would be a lot more "popular", if there were a good beginner's guide?

Anyway, I'm glad it is working now
