Hi,

I was wondering where the difference between these 2 bazaar packages is. In my current project I could need something like theses packages and I wanted to use the "current" one if there is something like that

Is one of theme the successor of the other or which one is better/more feature rich?

I took a look at what TheIDE uses as tabs and it uses QuickTabs but not from the bazaar but from yet another package: ide/QuickTabs

So why are there 2(3) packages for the same?
