Thanks, this is stupid bug indeed.

I have resolved it with this simpler/cleaner fix:

```
void ColumnList::DoLeftDown(Point p, dword flags) {
    selclick = false;
    int i = GetDragColumn(p.x);
    if(i >= 0) {
        ci = i;
        dx = p.x - GetColumnCx(0) * (i + 1);
        mpos = p.x;
        SetCapture();
        Refresh(mpos - dx, 0, 1, GetSize().cy);
        SyncInfo();
    }
    else {
        int i = GetItem(p);
        if(i >= 0 && i < GetCount() && multi && IsSel(i))
            selclick = true;
        else
            DoClick(p, flags);
    }
}
```

```
void ColumnList::LeftDown(Point p, dword flags) {
    DoLeftDown(p, flags);
}
```

```
void ColumnList::LeftDouble(Point p, dword flags) {
    DoLeftDown(p, flags);
    WhenLeftDouble();
}
```

(Moral of the story - be careful with calling virtual methods...)
