Subject: Wierd: compiling crahes Window Manager!

The strangest thing happened to me. I use Window maker for Window manager. It has given be the most stable performance by not crashing in the last 4 years.

Yesterday, I thought of trying out UPP. . I installed the deb from download section. I opened a example and hit the compile button. Windowmaker simply started restarting over and over again. (It can fortunately restart itself on crashing and continue to manage existing windows).

THe wierder thing is Theide kept working. Though the Window manager was reloading over and over, I could still press File>Quit in Theide with no problem. and once it quit, everything came back to a sane state. This happens everytime I hit the compile button. I havent tried anything else in Theide. This happens for any example I choose.

My Machine config:

```
 lax@laxtop:~/fbeta$ cat /proc/cpuinfo
