4.2 is flawed.

See this:

<http://www.ultimatepp.org/forum/index.php?t=msg&th=3466&start=0&>

Now of course the problem is what GCC is theide using. I am not quite sure how you got your U++; AFAIK regular svn .deb for Ubunut with theide binary has 4.1 as dependency and uses it to compile (presets the build method).

Have you installed with binary or compiled theide from sources?

Mirek
