Subject: Dual Screen Bug

I've got a dual screen setup (configured as separate X screens)

The way it works, is if I start a program on screen 1 it runs on screen 1, and switching desktops on screen 1 will only switch on screen 1, screen 2 is untouched. The same goes for screen 2, if I start a program ons screen 2 it runs on screen2, (and cannot be moved to screen 1)

All except for theIDE. If I start on screen 2, it appears on screen 1. The buttons aren't there, and cannot be pushed but the text for the buttons is there.

If I start on Screen 1 all works as expected.
Version of TheIDE is Opre.2008.1-rc1 (64 bit)
