I would like to see more manual-oriented docs. It seems much more effective than simple listing of classes (which is very useful in a number of cases). I like it because knowing all the methods doesn't guarantee knowing how to use them effectively.

This is especially actual for U++ which introduces innovative and uncommon approach in many aspects of C++ programming.

These two doc types - reference and manual, should be tightly connected and cross-referenced. So, agreeing with words above about making big list of all planned classes topics, I'd add that we should plan the general structure of manual-type docs. That is the thing I mentioned some time ago and now I put it into discussion again.
