Great job!.

SvnLib compiles successfully on MinGW, but it fails to compile on MSVC9.0 with the following error:

Quote:

```
----- CtrlLib ( GUI MSC9 DEBUG DEBUG_FULL BLITZ WIN32 MSC ) (1 / 11)
----- SvnLib ( GUI MSC9 DEBUG DEBUG_FULL BLITZ WIN32 MSC ) (2 / 11)
SvnLib.cpp
c:\myapps\svnlib\svnlib.cpp(867) : error C4716: 'Upp::Svn::UpdateInfo' : must return a value
SvnLib: 1 file(s) built in (0:05.68), 5687 msec / file, duration = 5703 msec
```

There were errors. (0:05.84)

In SvnLib.cpp,

```
// updates info from current repository
Svn::Errors Svn::UpdateInfo(void)
{
}

} // END Svn::UpdateInfo()
```

Should return an error code. I'm suprised that the ever-complaining MinGW did not give any errors, not even a warning.
