Or, even better, a page for each function, or class or whathever. A dialog with fixed fields for input, like this:

Title: xxxxxxxxxxxxxxxxxxxxxxx

Description:

Usage:

Parameters:

Result:

Caveats:

Example:

See also:

that's all. Click OK and you have it autoformatted in richedit or whathever you like. A button to insert links would be good also. Quick to enter documentation, not loosing time to format it. Of course, a button to get it back into dialog for editing.

BTW, I'd prefere a doc page for one item, too... putting 30-40 items with short description in one page is not enough and time consuming to look for info, IMHO.
