```
cmd output:___main: duplicate
-> used:    libmingw32.a:gccmain.o:1
-> discarded: libgcc.a:___main.o:1
1 undefined symbol(s):
_WinMain@16 (referenced from libmingw32.a:main.o:1; _main; .text)
linking aborted due to fatal errors
collect2: ld returned 1 exit status
```

Well, this means that you are building GUI program, but your main function is "main" (or CONSOLE\_APP\_MAIN).

Use GUI\_APP\_MAIN instead (that contains "WinMain" inside).

"no input files" - I am clearly puzzled by the error.

I am really sorry for causing troubles there. I hope that in the near future (hopefully as soon as next version next week) MySQL/MinGW combo will work out of box.

Mirek
