Here is an arc (look at the outermost one, for example...) which is drawn by

```
DrawArc(  
    Rect(11, 58, 291, 338),  
    Point(274, 130),  
    Point(27, 130)  
);
```

Where the center point is Point(151, 198).

It's obvious what I want to get, and it's also obvious that I don't !

The circle is correct, I mean the center and radius are right, just start and endpoint are mistaken.

Max
