Hi all,

I download today the latest version of Upp and I have to adapt my app code, basically on SetBkColor calls. Now, I think we should use the SetStyle. Well, in a form I want to change the bk of the edit field where the user enters text (OnChange event). I have this code:

```
void X::OnChangeEditBox(void) //Called from on change event
{
    EditField * pEdit=dynamic_cast<EditField*> (GetLastCtrl());
    edits=EditField::StyleDefault();
    edits.paper=Yellow();
    pEdit->SetStyle(edits);
}
```

Then when I try it I write text on the edit boxes but background only get yellow when the Edit box loose the focus and not while I write text to it.

Any help?

Thanks

Kim
