
Subject: ArrayCtrl: Column::Edit and control disappears

I want to make some multi-column list, where 2 of the columns have values selected from DropDownList with predefined values. I've tried to choose the easiest way:

```
propAddTypeList
```

```
.Add("prop_1")
```

```
.Add("prop_2")
```

```
.Add("prop_3")
```

```
.Add("prop_4")
```

```
.Add("prop_5")
```

```
.Add("prop_6")
```

```
.Add("prop_7")
```

```
.Add("prop_8");
```

```
propList.AddColumn("....", 4).Edit(propAddTypeList);
```

I hoped this should make everything alright. After app starts this column has droplist. The problem is when i walk through rows (with mouseclick?) - this control disappears and never appears again.

I tried to restore control manually, but with no luck:

```
propList.WhenEnterRow = THISBACK(OnEnterRow);
```

```
...
```

```
void Razdel::OnEnterRow()
```

```
{
```

```
    propList.ColumnAt(1).Edit(propAddTypeList);
```

```
}
```

Is it a bug or I'm doing something wrong?
