cbpporter wrote on Mon, 21 July 2008 08:56l guess we have different representations on what a tree control should do.

Maybe it would be better for me to find a different solution rather than tweak OptionTree to suit my needs, since it seems that it was built with other needs in mind.

Actually, you might be right about this - since the first moment I wonder why do you need such complicated manipulation with the tree.

Usually, in cases like this, I tend to have separate data model and only dump it into the widget before user interaction is required.
