Quote:...if we have installed g++-4.1 it needs libstdc++6-4.1-dev (g++-4.1 dependencies say that) and if libstdc++6-dev (no matter which version 6-*) is installed, Ultimate++ can be used to develop software...

I've updated linux_scripts from svn to use libstdc++6-4.1-dev.

As I said in a message, I've tried U++ on Ubuntu 8.10 (next release, still Alpha), i hope this fix also U8.10 problem, which was caused by merge of some packages from Debian in Ubuntu.
