Subject: Toolbar Gap() and GapRight() problems [BUG?]-[OPEN!]
Posted by unodgs on Tue, 14 Mar 2006 14:44:33 GMT

Look at first example:

[n] - toolbar n'th item
:   - Gap() (free space)

----
[0]:[1]::::::::::::::::::::::::::::[2]
----

and the code to build such a toolbar

```
bar.Add(item0);
bar.Gap();
bar.Add(item1);
bar.GapRight();
bar.Add(item2);
```

All this is very intuitiv.

Now the problem. It it immposible to create the toolbar like this (using Gap() and GapRight()):

----
[0]:[1]:::::::::::::::::::::::::::[2]:[3]

The code should look like:

```
bar.Add(item0);
bar.Gap();
bar.Add(item1);
bar.GapRight();
bar.Add(item2);
bar.Gap();
bar.Add(item3);
```

But this wont work, because Gap() does not distinguish if it is placed before or after GapRight().

To have right aligned items separated with free space I have to add empty labels or any other invisible control..

Can this be fixed?
