I got the following error after updating to 2008.1:

c:\upp\uppsrc\richtext\txtop.cpp(54) : fatal error C1001: An internal error has occurred in the compiler.

(compiler file 'f:\dd\vctools\compiler\utc\src\p2\main.c[0x51144100:0x0000002C]', line 182)

To work around this problem, try simplifying or changing the program near the locations listed above.

Please choose the Technical Support command on the Visual C++

Help menu, or open the Technical Support help file for more information

Internal Compiler Error in C:\Programme\Microsoft Visual Studio 9.0\VC\Bin\cl.exe. You will be prompted to send an error report to Microsoft later.

Again the old Hydra-Problem?
