Really nice functionality!

But I would make it a a normal class, and if I need singleton design pattern I would just use the Single template provided by U++. And macros? There has got to be another way to do the logging without those terrible macros . What if I have a function somewhere named UPPLOG or LOGGER?

But the rest is nice and I'll give it a try (after I remove the macros) since I use DUMP a lot, especially under Linux, and I've been wishing for something a little more powerful.
