I am right now uploading "non-public" main repository mirror to the

<http://code.google.com/p/upp-mirror/source/checkout>

I plan to to create either svn commit hook or maybe cron job to do it regulary. So at worst, the mirror will be only one day behind...

(The problem is that svnsync to googlecode seems to be quite slow - it takes about 5 minutes to send one revision).

Mirek
