(UPDATE: THERE ARE BINARY AND SOURCE RPMS FOR FEDORA CORE 9, SUSE 11.0 AND MANDRIVA 2008.1 SPRING IN FOLLOWING POSTS)

Hi

I have done the test on Mandrivalinux 2008.1 x86_64 and i586.

Before release a complete rpm source package on sourceforge.net (not binary), I would like to know if you successfully compiled, installed Ultimate++ on your favourite rpm Linux distribution?

Here you can find instructions: http://www.ultimatepp.org/forum/index.php?t=msg&th=3722& amp; amp; amp;start=0&

But is faster to read on here

Many thanks
