rpm -q --provides xorg-x11-devel

xorg-x11-compat70-devel

xorg-x11-man

XFree86-devel

xorg-x11-devel = 7.3-64.1

rpm -q --provides libexpat-devel

libexpat-devel = 2.0.1-62.1

I actually did a new install on a clean system (no dev packages installed) and satisfied dependencies one by one to make sure that everything is ok. Those 3 libraries are the only ones which my distro does not provide under that name.

I tried using --nodeps to build the rpm, but I got:

Installing /home/raul/upp-2008.1-1.src.rpm

warning: user camrein does not exist - using root
warning: group camrein does not exist - using root
warning: user camrein does not exist - using root
warning: group camrein does not exist - using root
warning: user camrein does not exist - using root
warning: group camrein does not exist - using root
warning: user camrein does not exist - using root
warning: group camrein does not exist - using root

Executing(%prep): /bin/sh -e /root/rpm/tmp/rpm-tmp.5889

```
+ umask 022
+ cd /root/rpm/BUILD
+ cd /root/rpm/BUILD
+ rm -rf upp-2008.1
+ /bin/mkdir -p upp-2008.1
+ cd upp-2008.1
+ /usr/bin/gzip -dc /root/rpm/SOURCES/upp-src-2008.1.tar.gz
+ tar -xf -
