Well, I didn't install patch, or rpmbuild for that matter. If it is needed, I don't understand why it did not warn me before it started spitting out all those logs.

Now I get:

```
Installing /home/raul/upp-2008.1-1.src.rpm
warning: user camrein does not exist - using root
warning: group camrein does not exist - using root
warning: user camrein does not exist - using root
warning: group camrein does not exist - using root
warning: user camrein does not exist - using root
warning: group camrein does not exist - using root
warning: user camrein does not exist - using root
warning: group camrein does not exist - using root
