koldo wrote on Mon, 25 August 2008 06:31Well, I have been working with it but still there is something wrong, as I get an exception and the date fields are not properly filled (at least using a non english date format and scan).

But in the other side, I think "Upp::Split(lines[i], '\t');" is not right as it discards empty cells that would have to be copied empty.

Still working in it. Any idea from unodgs?

Maybe excel fills clipboard in his own format too (not only as text). Then it would be easier to paste it to gridctrl. I must find some information about it. But I'll also check if there is a way to parse text data properly.
