2008 for the year. 01 for the release. From now, all new U++ release will have a name like 20xy.z.

But, for bug fix release, will it be 2008.2 or 2009.1 if the new release comes in 2009?

Could U++ use 2009.0.0 instead of 2009.1 for next major release? That way, I will be able to use 9.0.0.
