Subject: Assist autocomplete cause program crash.
Posted by captainc on Wed, 27 Aug 2008 20:58:10 GMT

I had a complex templated class with multiple inheritance:
template<typename T>
class MultiArg : public Pte<MultiArg<T>>, public TArg, public Vector<Value>{
When I use "this->" in a class method definition and the autocomplete menu attempts to show, the program crashes.
I've removed the Pte<MultiArg<T>> because it is not needed and then assist works fine and there are no crashes. While may nothave been correct to use both Pte and Vector, it shouldn't have crashed.
