I've just updated the SVN, however, I'm no longer 100% sure whether I'm using the correct repository. Is https://upp.svn.sourceforge.net/svnroot/upp/trunk still correct?

Various bug fixes + some new features:
- Greatly improved animation performance (I think this was caused by an image resizing bug in chameleon that has since been fixed, but I now cache the image regardless).
- 'Activate' functions that bring a window to the foreground if it's hidden or open it if it's closed
- Layout 'locking'. When the locked all frames and buttons (except for tabs) are hidden and the user cannot modify the windows layout.
- some addition customisation options.
