Hi,

I am trying to get a double (I think) from a sqlite3 database but I see a bad number. Ints and Strings no problem.

Here the code:

```
if(!SQL.Execute(Format("Select sum(ammount) from Pags where Num_Cli_Pag=%d",nNumCli))
{
    PromptOK("Error!");
}
if(!SQL.Fetch())
{
    edDeb.SetData("0");
}
else
{
    double d=(double)SQL[0];
    strTemp=Format("%f",d);
    edDeb.SetData(strTemp);
}
```

What am I doing wrong?

Thank you

Alex
