First of all, I think UPP is a fabulous project. I'm only getting to grips with it at the moment, but I can already see the amount of potential that this program holds. Amazing. Keep it up guys.

Now on to my first query:

I'm trying to build SqlCommander, but there seems to be a problem with the MT option. I see from another post that the necessary build option is "GUI MT .NOAPPSQL" and everything appears to work fine up to this point:

```
Quote:----- Web ( GUI MT GCC DEBUG BLITZ WIN32 ) (23 / 25)
----- Ole ( GUI MT GCC DEBUG BLITZ WIN32 ) (24 / 25)
----- SqlCommander ( GUI MT NOAPPSQL MAIN GCC DEBUG BLITZ WIN32 ) (25 / 25)
Linking...
c++.exe: /nodefaultlib:LIBCMT: Invalid argument
```

There were errors. (0:51.60)

Is there a problem with my version of MinGW. As far as I know, I have the newest version - 3.4.2

I can't seem to solve this problem.

Any help would be much appreciated,
thanks,
Garry
