nixnix wrote on Wed, 03 September 2008 10:38Ok, good to know. Thanks. It must be something else.

Have you tested much under 64 bit windows? I notice that all the code which distinguishes between windows and linux uses the `#ifdef PLATFORM_WIN32` directive. Is this flag set when one is compiling 64 bit code under windows?

Nick

IMO, you can say that Win32 is a subset of Win64...
