Subject: Is there a way to fetch objects w/o default constructor?

Simplified code as a description of problem:

```
class Project
{
   Project(TabCtrl &tabs) {/*add new tab with Project controls*/}
};

class App
{
   void Serialize (Stream &stream) {stream % projects;} //ERROR: no default constructor available
   Array<Project> projects;
   TabCtrl       mainTabs;
};
```

Is there a way I can fetch my Project objects with auto-adding to the tabs?
