
Subject: Is there a way to fetch objects w/o default constructor?

Simplified code as a description of problem:

```
class Project
{
    Project(TabCtrl &tabs) { /*add new tab with Project controls*/ }
};

class App
{
    void Serialize (Stream &stream) { stream % projects; } //ERROR: no default constructor available
    Array<Project> projects;
    TabCtrl      mainTabs;
};
```

Is there a way I can fetch my Project objects with auto-adding to the tabs?
