hojtsy wrote on Mon, 20 March 2006 03:26The same thing happens with .iml files, they switch to text view in debugging. And I am having a problem with switching back to designer view. When the debugger is running I either don't have "Edit in designer (Ctrl-T)" in the Edit menu, or I have but it doesn't do anything. I am running 603-dev1 version.

This is deliberate. Both .iml and .lay are C++ code that can be traced.

In other words, if debugger traces the code down to .lay or .iml, how would you expect to show the current location in graphical designer?

Mirek
