Mindtraveller wrote on Tue, 09 September 2008 17:42I`d like to add some thoughts about template. If it is appropriate.

1. I think template should contain summary table of functions. Columns: function name (hyperlink to long description), function parameters, description. Table should be divided by functional groups. And functions inside each group are to be sorted alphabetically. Talking about size, summary table of constructors would look good.
3. Long descriptions of functions should go below summary tables.

IMO, this is not quite necessary. I have tried before and had always had problems distinguishing "short" and "long" description.

Moreover, table format does not work well - long singatures of methods go into more lines (at least, more likely) and are unreadable.
