Hi to all,

Tried to run it at WIN2K with 2008.1, but got the following (excerpt):

C:/upp/out/MyUppApp/MINGW.Debug.Debug_full.Gui.Main\$blitz.o: In function
`_ZN8MyUppApp11che
 ckConfigEv':
D:/upp/MyApps/MyUppApp/MyUppApp.cpp:313: undefined reference to
`__imp__PathAppendA@8'
D:/upp/MyApps/MyUppApp/MyUppApp.cpp:315: undefined reference to
`__imp__PathAppendA@8'
D:/upp/MyApps/MyUppApp/MyUppApp.cpp:339: undefined reference to
`__imp__PathAppendA@8'
D:/upp/MyApps/MyUppApp/MyUppApp.cpp:340: undefined reference to
`__imp__PathAppendA@8'
C:/upp/out/MyUppApp/MINGW.Debug.Debug_full.Gui.Main\$blitz.o: In function
`_ZN7OptionsC1Ev':

The only files were "PathAppend" can be found in are "MyUppApp.cpp" and "Options.cpp".
Interesting that following code:
#ifdef flagWIN32
 TCHAR szPath[MAX_PATH];
 SHGetFolderPath(NULL, CSIDL_APPDATA, NULL, 0, szPath);
 PathAppend(szPath,"MyUppApp");
 PathAppend(szPath, cfgfile);
 fullpathtocfgfile = szPath;
#else
 fullpathtocfgfile = cfgfile;
#endif

can be found in both.
@Yeoh: that's intended? Seems to be redundant code.

Commenting one of them had the effect that the errors from before were gone, but got the missing
"szPath", which is not a miracle.
Anyone has a hint for me please?

kind greets
Martin
