bytefield wrote on Fri, 12 September 2008 19:43As a suggestion, you may use *.zip format, in that way me and others working on Linux will can extract the archive without having to install other programs. I think that zip is more "portable" than rar so if you want in the future to use zip instead of rar i will be pleased. Thanks (hope you take this as a "constructive criticism", even if it isn't related to your code).

Sorry. I've changed the format to zip. From now on I'll remember that. Thanks.
