Please, could anyone tell me which would be the correct package to install with Fedora distribution :

upp-2008.1-1.fc9.i386.rpm ?
upp-2008.1-1mdv2008.1.i586.rpm ?
upp-2008.1-1.src.rpm ?
suse11.0.i586.rpm ?
upp_2008.1_amd64.deb ?
upp_2008.1_i386.deb ?
upp-freebsd-port-2008.1.tgz ?

Well, I use only kubuntu with *.deb packages, but as far as I know, Fedora uses *.rpm so I think "fc9" stands for fedora core 9 (redhat)? It is probably the package you're looking for.
