Subject: CR visibile with notepad

Hello,

the ASCII file I'm generating have, when showed by a simple editor as notepad, a rectangular empty box at the place of the invisible carriage return (see after the word "Master")

Notepad does not recognize it as a real CR. In wordpad instead it does not appear and works ok.
In the past this character did not appear with notepad.
Because it is causing problem during the parsing of the txt file I would like to know if it is normal.

The txt file is generated by code like this

```
FileOut out(filename);
out << NFormat( "%-30.30s\n", NAMETORNEO);
out << NFormat( "%-30.30s\n", PLACETORNEO);
...
```

Thanks,
Luigi
